

Crossing Pads

When access paths cross into the Rail Corridor

These markers that resemble timber train sleepers are made of glass fibre-reinforced concrete (GFRC) planks. By marking intersections and potential conflict zones, they serve as clear visual cues to:

Promote Safety

- Alert visitors to slow down and look out for others who may be entering or exiting the trail from the access paths
- Remind cyclists to slow down at these points, and hikers to stay alert for oncoming traffic

Access to toilet block at 9 Mile Junction

Enhance Wayfinding and Safeguard Greenery

- Guide visitors at designated points, so that they do not stray off the trail
- Make orientation and navigation easier and reduce environmental impact as visitors do not step on greenery

Access to Hindhede Walk
